

```
h1 {  
    color: green;  
}
```

color: green;

Let's take a look at a single **CSS** selector & rule:

```
h1 {  
  color: green;  
}
```

- ✦ yellow = selector, green = rule
- ✦ This piece of CSS finds all `<h1>` tags in your HTML file...
- ✦ ...and changes the text in all of them to green!

**You can have multiple rules
within rules within a selector!**

```
h1 {  
  color: green;  
}
```

✦ Guess what this does!
