

See your website!

The screenshot displays the Glitch.com web editor interface. The browser's address bar shows 'glitch.com'. The user's profile is 'prophetorpheus'. The file explorer on the left lists 'assets', 'README.md', 'index.html' (selected), and 'style.css'. The code editor shows the following HTML code:

```
10   Prophet Orpheus
11   </h1>
12   <p>
13     Coder Dino
14   </p>
15   <p>
16     Will code for food!!!! 🌈
17   </p>
18 </body>
19 </html>
```

A yellow box highlights the 'Show' dropdown menu, which has two options: 'In a New Window' (selected) and 'Next to The Code'. The preview window on the right shows the rendered website with a light blue background. It features a cartoon dinosaur holding a book labeled 'docs', the title 'Prophet Orpheus' in purple, the name 'Coder Dino', and the text 'Will code for food!!!!' followed by three rainbow emojis.

Aww yessss!
