

Glitch

hack.af/glitch

hack.af/glitch

The screenshot shows a web browser window with the address bar displaying 'glitch.com'. The page title is 'bony-wind-glade' and the current file is 'README.md'. The left sidebar shows a file explorer with 'assets', 'README.md' (selected), and 'index.html'. The main content area displays the text of the README file, which includes a welcome message, instructions on how to use the project, and a list of files to be added.

This is your first website!

This is a basic static HTML starter project you can build on however you like. No need to save. While you develop your site, your changes will happen ✨ immediately in the preview window. You can upload assets like images or audio in `assets` to the left. The rest is up to you and your imagination.

What's in this project?

- ← `README.md` : That's this file, where you can tell people what your cool website does and how you built it.
- ← `index.html` : This is the main HTML page for your site.

What you'll be adding to this project:

- ← `style.css` : CSS files add styling rules to your content.
- ← `script.js` : If you're feeling fancy you can add interactivity to your site with JavaScript.
