

**<html>**

**<head>**

**</head>**

**<body>**

**</body>**

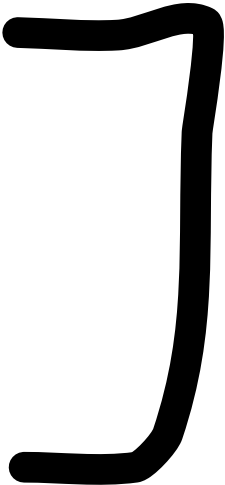

**</html>**

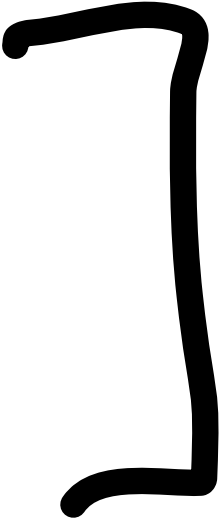

<head>

</head>

<body>

</body>

An **HTML** file typically contains a `<head>` & `<body>`.

```
<html>
```

```
<head>
```

```
</head>
```

```
<body>
```

```
</body>
```

```
</html>
```

the head conveys information about the page to the browser

the body holds everything you see on your website

You'll see this at the top  
of every **HTML** page:

```
<!DOCTYPE html>
```

This tells the browser what  
version of HTML to expect.
